

Alex (College Student)

A 20-year-old student who frequently texts friends using slang and acronyms. Alex values speed and convenience but gets frustrated when autocorrect changes casual language incorrectly.

Alex is texting a friend using slang like “idk” and “lol,” but autocorrect changes them into incorrect words. This slows down communication and causes frustration.

💡 Smart Autocorrect learns your words, respects your style, and makes texting stress-free!

Maya (Young Professional)

A 26-year-old marketing assistant who regularly writes emails and reports. She needs accuracy and professionalism, but autocorrect sometimes changes correct technical terms, causing extra work.

Maya is writing an important email using correct industry terms, but autocorrect changes them into incorrect versions. She has to manually fix mistakes and double-check her work.

Storyboard: Professional Email – Autocorrect Problem & Solution

★ Smart Autocorrect understands context, learns your words, and helps professionals communicate with confidence.

Nina (Working Professional – Dual Use)

A 24-year-old employee who uses her phone for both personal texting and professional communication. She struggles because the same autocorrect system mixes casual slang with formal writing.

Nina writes a professional email, but her autocorrect (used for personal texting) changes words into slang. She realizes the tone is unprofessional and switches to a professional mode to fix it.

Storyboard: One Corrector, Two Modes – Professional vs. Personal

★ One corrector. Two modes. The right words for every situation. 😊 Personal Mode for you. 📧 Professional Mode for work.
